ABSTRACT

This is the second annual report on the condition of Connecticut's public school facilities required pursuant to Section 10-220 of the Connecticut General Statutes. The data in this report reflect the responses of school district officials to various survey questions. The report includes tables which list school-by-school responses to all survey questions, but the discussion is generally restricted to summary reports grouped in fairly broad categories--education reference groups (ERGs) and school types (elementary, middle, and high).Following a discussion of current construction activity and cost estimates, over 40 data elements gathered for each school are subdivided into the following groups: general building conditions, appearance and upkeep, building service systems, dedicated specialty areas, size and capacity, and local facility planning and maintenance. Foreword

This is the second annual report on the Condition of Connecticut's Public School Facilities required pursuant to Section 10-220 of the Connecticut General Statutes, which reads in part:

> Each local or regional board of education shall maintain good public elementary and secondary schools, . . . shall report annually to the Commissioner of Education on the condition of its facilities and the action taken to implement its long-term school building program, which report the commissioner shall use to prepare an annual report that he shall submit in accordance with section 11-4a to the joint standing committee of the General Assembly having cognizance of matters relating to education; . . .

The report is presented in essentially the same format as last year with one exception. We have moved the section on current construction activity and cost implications to the front of the report. School construction has taken a more prominent place on the education agenda in many states over the past few years. It is receiving increased national attention as well. Here in Connecticut over $2 billion of school improvements have been authorized under the state's new progress payment program since it began in 1997, and applications received from school districts requesting legislative approval in 2000 would add $1.5 billion in additional projects. We thought it important to relocate this chapter of the report and add emphasis to it.

Despite the magnitude of the construction that is underway or being planned, the thousand or so buildings that make up Connecticut's public school infrastructure do not change dramatically as a group in a single year. It often takes three to five years to conceive, authorize, fund, plan and carry out a large project. Over a period of several years we should see a greater impact from the improvements currently authorized.

The data in this report reflect the responses of school district officials to the various survey questions. As with any survey that calls for judgment on the part of the respondents, there is a subjective element that, in turn, calls for some caution on the part of the reader in drawing conclusions about any single school or town, or in comparing individual schools and/or towns with each other. For that reason, while we have included tables in the report which list school-by-school responses to all survey questions, we have generally restricted our discussion to summary reports grouped in fairly broad categories--education reference groups (ERGs) and school types (elementary, middle and high).

In presenting the over 40 data elements gathered for each school, we have subdivided data into the following groups: general building conditions; appearance and upkeep; building service systems; dedicated specialty areas; size and capacity; and local facility planning and maintenance.

Theodore S. Sergi
Commissioner of Education

Highlights

- ✓ State and local government in Connecticut have made a significant commitment to school improvements this decade ($3.9 billion), particularly over the past four years ($2.6 billion). An additional $1.5 billion of new construction and renovations are pending authorization during the upcoming legislative session.

- ✓ About half of all school facilities have had (during the 1990s) or are authorized for major renovations that should extend their useful lives well into the next century (average age for facility renovations is about 20 years).

- ✓ Not surprisingly, facilities conditions do not change significantly in most cases within a year's time. For the most part, the report reflects comparable facility ratings as were reported last year by school district officials. It should be noted, however, that the positive changes outnumbered negative changes by a 2 to 1 margin.

- ✓ Technology items showed the most improvement. Technology infrastructure, which measures the building's capacity to accommodate technology and communications, and education technology, which focuses on the actual usage of hardware/software/ communication devices in classrooms, showed the greatest gains. Forty-five percent of facilities reported reasonably adequate or better technology infrastructure this year compared to 37 percent last year. For education technology (usage within the school), the percentage of facilities with reasonably adequate or better ratings grew by at least 5 percent at all school grade levels.

- ✓ Like most public schools across the United States, the vast majority of Connecticut's facilities were built during the 1950s and 1960s and have reached an age where significant renovation or even replacement is necessary.

- ✓ The average age for elementary schools is 49 years, significantly higher than high schools and middle schools, both of which average 37 years. The elementary schools in the state's neediest districts remain the oldest and the most likely to have gone the longest without major refurbishing.

- ✓ High schools tended to report more and better accommodations for dedicated specialty areas than either middle or elementary schools. Elementary schools, many of which serve very small enrollments, were far more likely to report no dedicated space for features such as art rooms, music rooms, gymnasiums and cafeterias.

- ✓ While some new construction will be necessary to accommodate enrollment changes, to support initiatives for preschool programs, class size reduction, and universal full-day kindergarten, and to replace certain facilities, the need to refurbish existing buildings will also continue to be strong.

- ✓ There has been substantial progress in the area of long-range facilities planning and implementation reported since the previous survey. This year, deficiencies have been cited in only 10 districts, down from about 39 districts in the prior survey.

Section 1
Current Construction Activity and Cost Estimates

Public school infrastructure is becoming a national issue. Enrollment growth to a new national high, creeping age of the original baby boom schools of the 1950s and 1960s, and new demands for technological upgrading, class size reduction, capacity for 3- and 4-year-old readiness programs and full-day kindergarten are among the reasons that a total price tag for needed school construction in the United States has been estimated to exceed $200 billion.

Connecticut is among a growing number of states with a construction financing program in place to address these needs. The state subsidy program that funds just over 50 percent of school building costs (based on an equalized 20 to 80 percent sliding scale) has been in place since the mid-1970s. Significant recent changes include the following:

- ✓ 100 percent state funding for interdistrict magnet schools
- ✓ releasing the state share of costs through progress payments over the life of the project, reducing the amount that local districts have to borrow up-front and eliminating the need for state interest subsidy grants
- ✓ increased state participation in the cost of renovations when an older building is completely retrofitted to like-new condition in lieu of more costly new construction
- ✓ new bonus provisions increasing the basic reimbursement rate as follows:
  - ✓ 10 percent for a cooperative school used by two or more districts
  - ✓ up to 10 percent for the construction of additional space for out-of-district students participating in the state's voluntary choice programs
  - ✓ 10 percent for lighthouse schools
  - ✓ 5 percent for new school readiness space
  - ✓ 5 percent for class size reduction space and early reading program space

Combined with the primary construction needs resulting from a decade of enrollment growth and the aging of existing facilities, these factors have produced record levels of school construction authorizations in Connecticut over the past several years. Over the past four years, $2.8 billion has been authorized for new construction and facility improvements. Eighty-five to ninety percent of that amount is targeted for major renovations, building additions or new schools. Applications filed for consideration by the Year 2000 General Assembly would add $1.5 billion in authorizations to the existing total.

The state appropriation for school construction has increased from $154 million in 1995-96 to $431 million this year. This increase reflects the growth in construction activity but is also the result of the change to progress payments in 1996-97. Over the near term (five to seven years), the cost of paying off the state share of local debt service on pre-1997 projects while making progress payments for all newer projects will increase the annual amount of state funding needed. The higher cost of progress payments will begin to level off in the mid term (eight to ten years) after which the state will begin to save significantly on the annual cost of its long-term debt for school construction as the total amount of indebtedness declines.

Section 1
Current Construction Activity and Cost Estimates
(continued)

Table 1 summarizes the approximate numbers of facilities that have been constructed or renovated in the past decade. While only 4 percent of existing facilities were built during the past ten years, 39 percent underwent significant building additions and renovations during that period. Another 15 percent are under construction, authorized to go forward, or are awaiting legislative authorization. There are also 61 new school projects (not part of the 1,001 existing schools) in some phase of the application/construction process.

Table 1

Summary of Public School Facilities Renovations* and New Construction

Facilities with no renovation reported since 1979.	342 34%	11 22%	33 25%	31 30%	50 42%	2 4%	49 34%	18 33%	55 36%	85 50%	8 25%
Number of new facility projects** underway, authorized, or pending legislative approval (not included in 1001 existing facility count)	61	5	5	8	6	4	6	1	6	15	5

*In most cases we can confirm from school construction records that the renovation status reported by a district is accurate. In some instances our records show that the work done may not have been extensive enough to upgrade all facets of a building, but the district lists it as a renovated facility. We have accepted the district's judgement in such cases.

** Includes four projects that have been submitted with dual applications for either a new replacement facility or a major renovation of the existing facility. A final decision by the respective school districts on which type of project will go forward is due by October 31, 1999.

Section 1
Current Construction Activity and Cost Estimates
(continued)

Of the existing schools, about one-third (342) have not undergone a major facility renovation since 1979, if at all. While it is possible that some of these facilities have been maintained in top condition through a series of smaller projects and effective long-term maintenance programs, it is more likely that over the next decade, these will be the buildings that come due for major retrofitting or in some cases replacement. Based on current construction costs, it would take an additional $5 billion to renovate and expand most of these facilities and replace some of them.

If districts were to seek authorization for this work over a five-year period, it could add $1 billion in new authorizations each year. If, on the other hand, projects were to be submitted over a ten-year period, the annual amount would be closer to $500 million, unadjusted for inflation. The number of major construction projects for the ten-year period 1989-1999 has averaged about 40 per year. While this points more to a ten-year timeframe, it must be noted that the year 2000 applications include double the typical number of major projects. There are too many factors that can impact local and state decision-making to forecast with any certainty the rate of construction activity out five to ten years. For example, any drastic change in economic conditions affecting state or local tax bases would impact those decisions.

The table also breaks out the facilities by Education Reference Group (ERG). (See Appendix C for a complete listing of towns by ERG. ERGs cluster similar towns for comparative purposes based on a series of socio-economic factors. ERG A reflects towns with the highest resources and lowest needs, with ERG I being the neediest.) Two ERGs stand out significantly from the rest. ERG E, which is made up of small rural districts with a combined total of 45 schools, reports 86 percent of its facilities as recently constructed, renovated or in the queue for such work. These communities experienced somewhat higher-than-average enrollment growth this decade and tend to have only one school facility. This may account in part for the high rate of facilities undergoing major construction renovations during this period.

ERG I, on the other hand, stands out as having the highest number (85) and percentage (50 percent) of facilities not renovated since 1979. It should be noted, however, that not all ERG I members are at the same place in this process. New Britain, for example, had an extensive construction program throughout its system dating back to the late 1980s. More recently, New Haven has moved into the implementation phase of a plan to upgrade its facilities and Hartford has just completed such a study. Refer to the school-by-school data in Tables 2B, 2C, 2D and 2E for additional detail.

Section 2
General Building Conditions

Not surprisingly, the overall ratings for Connecticut's 1,001 public school facilities did not change dramatically in the one year that has elapsed since the previous report. It tends to take several years for a major project to be conceived, authorized, planned and carried out, so we would not expect any dramatic shifts. However, the changes that were reported tended to show slightly more positive conditions this year.

Graph 1 shows the number and percentage of schools built in each decade of this century as well as those built prior to 1900. Not surprisingly, the vast majority of schools were built from 1950 through about the middle of the 1970s. Two of every three schools currently in use were built during this baby boom period. Fewer than one in ten schools has been built since then.

10/1999

Graph 1

Section 2
General Building Conditions (continued)

Table 2A looks at the age of elementary, middle and high school facilities by Education Reference Group (ERG). As far as the year of original construction goes, the average for elementary schools is pretty consistent in the mid-forties across all ERGs, except ERG I which carries an average age of 60 years. The average age for high schools and middle schools (37 years) is about 12 years lower than for elementary facilities and is in keeping with the baby boom population reaching those grade levels several years after reaching elementary school age. Also, the use of middle schcols is relatively new and may account in part for the age difference.

In many cases, the year of initial construction is probably not a reliable indicator of a building's current condition, although it may be helpful in assessing the likelihood of a facility coming due for renovation and/or retrofitting. For facilities older than 20 years, the timing of a facility's latest major renovation is probably a more useful measure of its present condition. Table 2A also provides the average age of the last reported renovation for each facility by school type and ERG.

Section 2
General Building Conditions (continued)

ERG I reports the highest average elapsed time since the last facility renovations for all types of facilities, but most noticeably for elementary schools where the average is 29 years versus the statewide figure of 21 years. While the need for major upgrading of a facility is dependent on a number of factors (including the quality of the original construction, changes in building codes, technological advances, program requirements and enrollment changes), the reported average age since schools were last renovated suggests that a twenty-year cycle for major facility upgrades is typical.

Updating a facility for compliance with building, health, safety and fire codes and more recently handicapped accessibility is certainly a major component of keeping a facility viable. While it is not unusual for districts to incorporate most major code work into larger scale renovations, it is also a common practice for codes to be addressed on a piecemeal basis school by school or for a single code to be addressed in all schools simultaneously. Consequently, a "no" answer to the question whether a major code update had occurred within the past ten years does not necessarily mean a facility has many code violations. A district with a strong maintenance program that addresses code issues through small, targeted projects may well have addressed all or most code issues over a ten-year period without resorting to a single major code update project.

On the other hand, violations in any of the fire, health, safety, accessibility, or general building code areas is a significant issue that ought to be addressed in a timely way. It is this very fact that often persuades communities to opt for smaller projects that target individual schools or codes rather than allowing violations to accumulate until support can be built for a major facility upgrade.

General Building Conditions (10/1999):

Notes:

These facilities are excluded from various reports and tables in this section because they: 1) could not be assigned elementary, secondary or middle school status; 2) could not be assigned to an ERG; and/or 3) their inclusion (alternative high schools virtually always operate in an older mothballed building with few comprehensive features) would tend to distort the results.

* Major renovation underway, authorized, or pending legislative approval for this facility.

N/R = None Reported.

Section 3
Appearance and Upkeep

In this section of the survey, school districts have again rated eight areas of each facility relative to appearance and upkeep. These included building facade, grounds/landscaping, classrooms, lavatories/fountains, entrance/hallways, lighting/fixtures, cafeteria, and code compliance. In addition to the item-by-item listing of responses for all schools reporting (Table 3E), we have summarized the data from this section in three tables. Table 3A summarizes the responses for all eight areas. As noted earlier, we have elected to summarize the data by ERG. (Note: Vocational-Technical schools have been reported as a separate group since they are not assigned to an ERG.) A handful of other facilities that could not be assigned to ERGs were omitted from Tables 3B and 3C. Finally, there are separate pages (Table 3D (1-8)) that show each survey question in detail. Data in Sections 4 and 5 of the report for other major groupings of facility characteristics are presented in a similar series of tables.

Taken as a group, the appearance and upkeep items again tended to rate higher than the items pertaining to building service systems and building specialty areas. Two out of five schools statewide reported all eight areas to be reasonably adequate or well above adequate, and four of five schools rated a majority of the items at that level. Eighty percent of schools reported no appearance and upkeep items that are less than adequate.

While the statewide results are fairly positive, the results for ERG I continue to be much less so. We noted that only 60.4 percent (Table 3B) of the schools in this group reported a majority of appearance and upkeep items to be reasonably adequate or better, well below the state average of 80.2 percent. And of the 66 schools which reported two or more inadequate conditions (Table 3C), 27 were located in ERG I.

There was considerable consistency in the responses from item to item. Reasonably adequate was by far the most common response (55 percent) followed by well above adequate (23 percent), minimally adequate (17 percent), less than adequate (4 percent), and not included (1 percent). Building code compliance was the item cited most often as being less than adequate (one of nine responses). No other item was cited in more than 5 percent of buildings.

The item-by-item tables on pages 27-34 include charts that allow comparisons of elementary, middle and high schools. For each item, the charts show very similar patterns for all school levels, an indication that appearance and upkeep conditions are unrelated to the grade range of the facility.

10/1999

Condition of Facilities: Appearance and Upkeep
Summary of Responses by Survey Item
Total Schools (N = 1001)

Building Facade:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

The facility is in sound condition, and there are no broken windows. The exterior is clean, bright, neat in appearance and free of graffiti, damage and vandalism. Instances of graffiti, damage and vandalism are promptly corrected.

SUMMARY TABLE

Rating	Description	Elementary Schools	Middle Schools	High Schools	All Schools
0	Not included in Facility	0	0	0	0
1	Less than adequate	24	7	7	38
2	Minimally adequate	84	22	16	122

Grounds/Landscaping:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

Areas are routinely kept free of litter and debris, lawns and shrubs are regularly trimmed, and all lawns/grass areas are fully covered. There should be some provision for green space and plantings that are appropriate to the site.

Classrooms:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

The classrooms are adequate in number and size for the programs offered. All casework, ceilings, walls and floor coverings are clean, neat and without damage. All windows are operable, and the rooms are regularly cleaned. There should be ample closet/ shelf space for storage of instructional materials, and bulletin boards, chalkboards, etc. sufficient to display student work and other materials for instructional use.

Code Compliance:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

All programs, including outdoor athletic facilities and play areas, are fully accessible to persons with disabilities. The entire facility is in full compliance with State building, fire, OSHA and health codes. There are automatic fire sprinklers throughout the facility. (Although not mandated by code, sprinklers and detection devices would be a significant component of a 4 rating on this item.)

Section 4
Service Systems

This section of the survey requires school districts to evaluate eight building features grouped under the general heading of service systems. These included internal communications, technology infrastructure, air conditioning, heating, interior lighting, exterior lighting, roadways and walks, and plumbing/lavatories. A summary of the responses to these eight items appears in Table 4A.

Service systems did not rate as high as appearance and upkeep items in general, but did show more improvement over the prior year. Items rated reasonably adequate or better increased from 55 percent to 58 percent of all responses. Although all items showed some improvement, technology infrastructure improved significantly. In 1999, 45.2 percent of facilities report reasonably adequate or better technology infrastructure, up from 37.3 percent in 1998. In the prior report, 370 schools reported this item to be less than adequate; this year 316. The release of the 1999 technology grant funds in June and the increase in school renovations should produce more improvement in this area over the next year or two.

Reasonably Adequate was the most common response for building service systems (42.2 percent) except for air conditioning which is not present in 58.4 percent of schools. Minimal adequacy was the second most common rating (23 percent of all responses), with the balance of responses fairly evenly split among the other three ratings.

Tables 4B and 4C summarize district responses for this group of survey items by ERG. While nearly three-fifths (58 percent) of all schools reported a majority of service systems to be reasonably adequate or better, ERG I (40.8 percent) is again a notable exception. ERG C is also low with 49.0 percent of its schools in this category. On the positive side, ERG I schools reported fewer schools with a multitude of systems deficiencies that was the case in 1998.

The individual item tables (Table 4D (1-8)) on pages 53-60 again tend to exhibit a comparable pattern regardless of the facility grade range, although secondary schools do show a little advantage in the areas of technology infrastructure and air conditioning. School-by-school detail is provided in Table 4E.

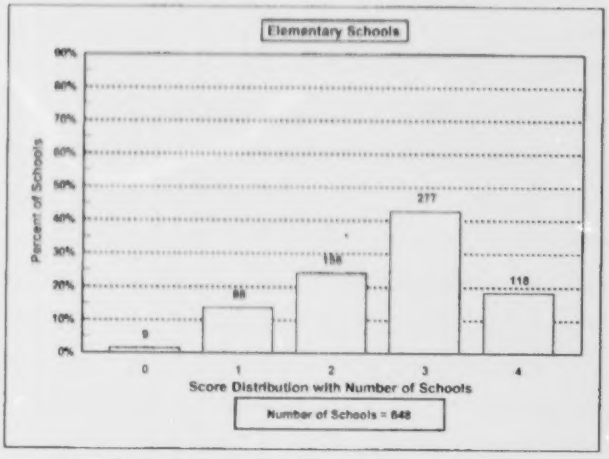
Internal Communications:

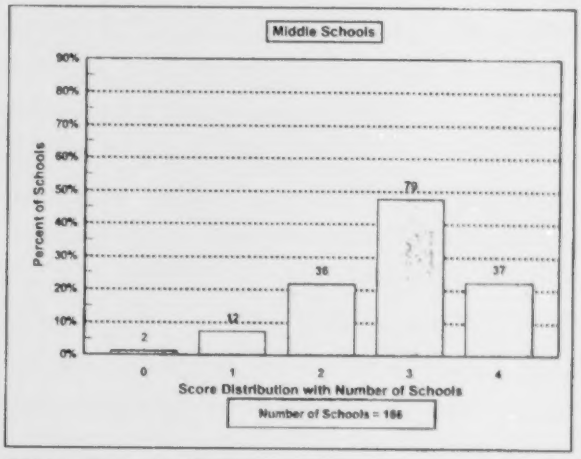
Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

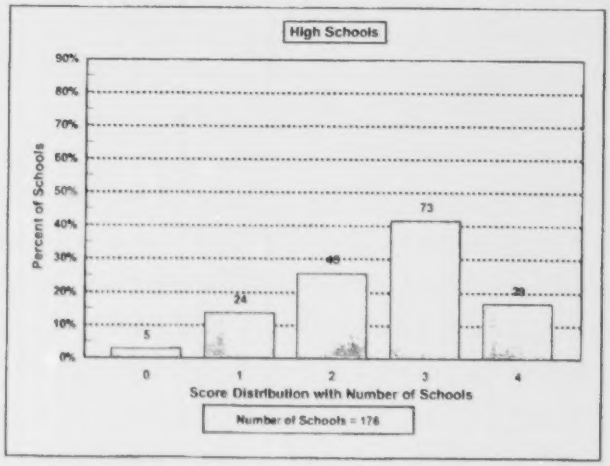
The facility has an intercom system enabling communication with all academic and administrative areas of the school individually and collectively. All classrooms have capacity to communicate with the principal's office and have access to an outside telephone line.

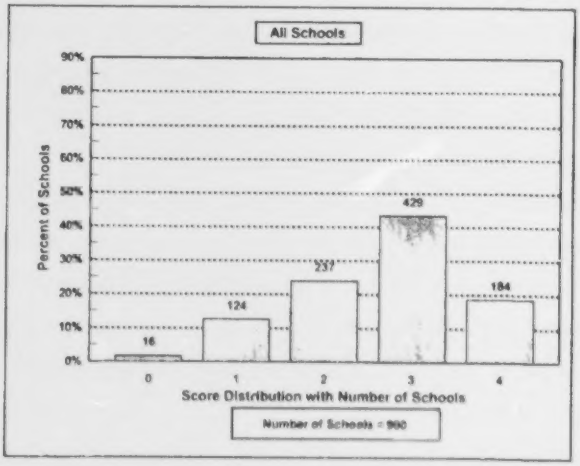
SUMMARY TABLE

Rating	Description	Elementary Schools	Middle Schools	High Schools	All Schools
0	Not included in Facility	9	2	5	16
1	Less than adequate	88	12	24	124
2	Minimally adequate	156	36	45	237
3	Reasonably adequate	277	79	73	429
4	Well above adequate	118	37	29	184
	Total responses	648	166	176	990
Percent of responses rated 0 or 1:					
	Internal Communications	15.0%	8.4%	16.5%	14.1%
	All system items	20.5%	17.0%	16.3%	19.2%
Percent of responses rated 3 or 4:					
	Internal Communications	61.0%	69.9%	58.0%	61.9%
	All system items	57.5%	61.2%	57.5%	58.1%









Technology Infrastructure:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

Basic voice, video and data transmission cabling system and devices connecting all program areas, all classrooms and school administration with adequate power available. Integrated system also includes clock, bell, paging and media control/retrieval. Can also include wireless systems for portable computing. (Differs from survey item # 18, Educational Technology, which is focused more on the use of hardware/software/electronic communications in the classroom.)

SUMMARY TABLE

Rating	Description	Elementary Schools	Middle Schools	High Schools	All Schools
0	Not included in Facility	102	14	32	148
1	Less than adequate	110	29	23	162

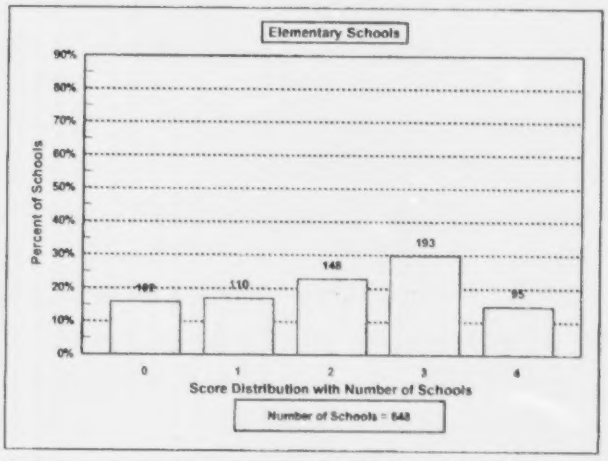
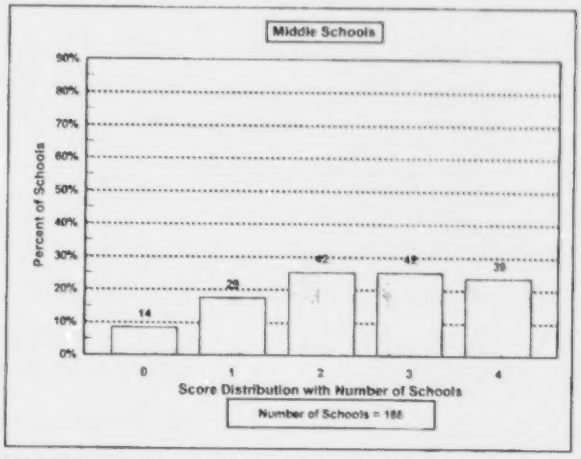
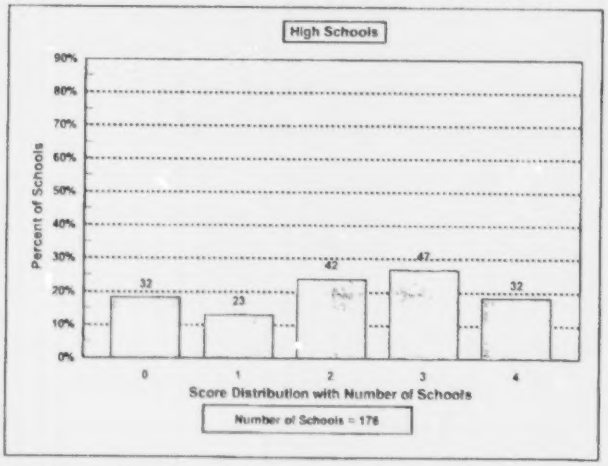
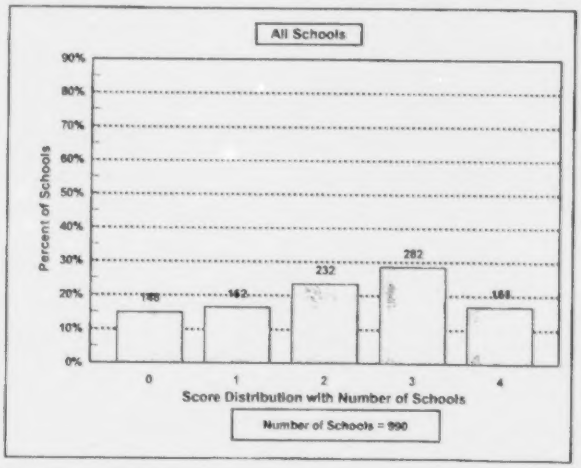
	Technology Infrastructure	44.4%	48.8%	44.9%	45.3%
	All system items	57.5%	61.2%	57.5%	58.1%









Air Conditioning:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

All instructional and student support service areas are air conditioned, as well as administrative areas. System works to keep the building comfortable throughout the cooling season. (If only administrative offices are air conditioned, this category should be responded to with a '0'.)

SUMMARY TABLE

Rating	Description	Elementary Schools	Middle Schools	High Schools	All Schools

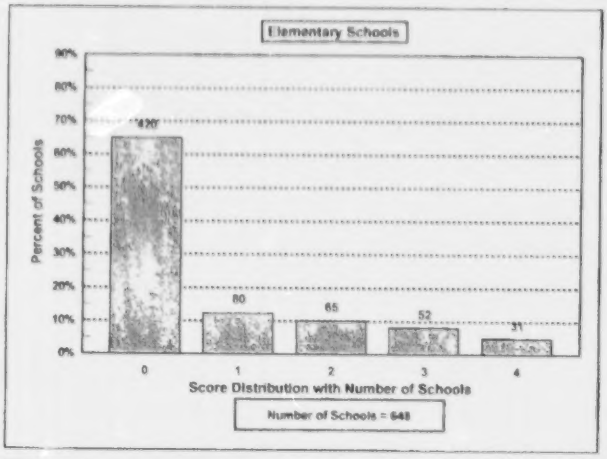
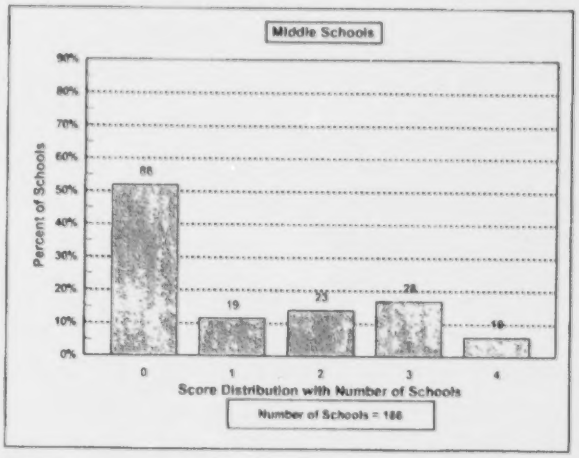
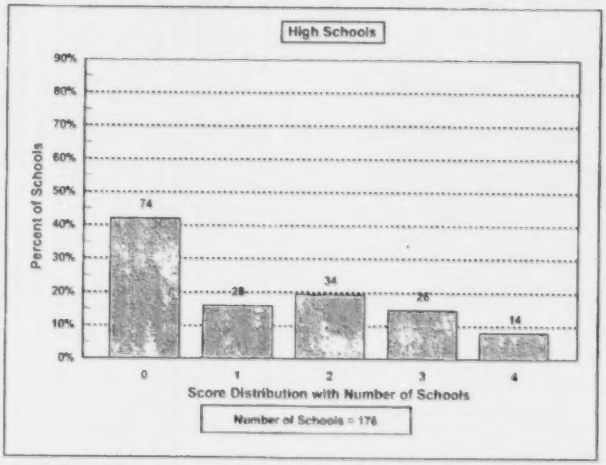
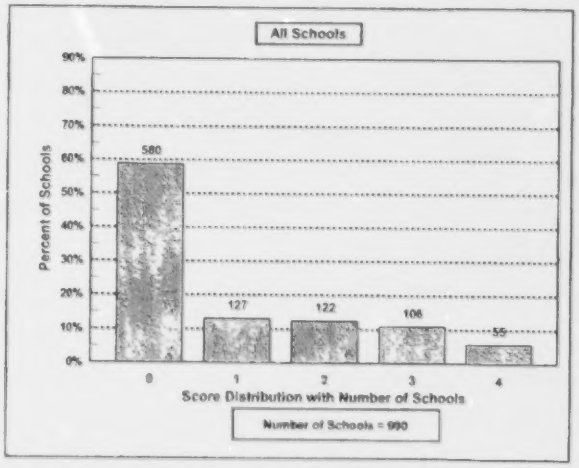
	All system items	57.5%	61.2%	57.5%	58.1%









Heating:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

Fully operational heating system with zoned controls that allow for regulation in each classroom and office area. System works to keep the building comfortable throughout the heating season.

SUMMARY TABLE

Rating	Description	Elementary Schools	Middle Schools	High Schools	All Schools
0	Not included in Facility	1	0	0	1

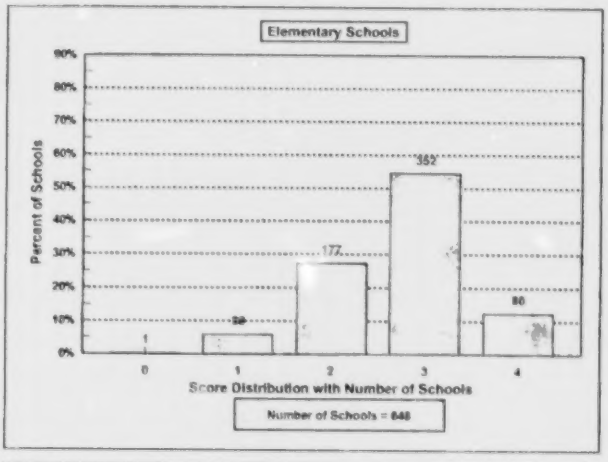
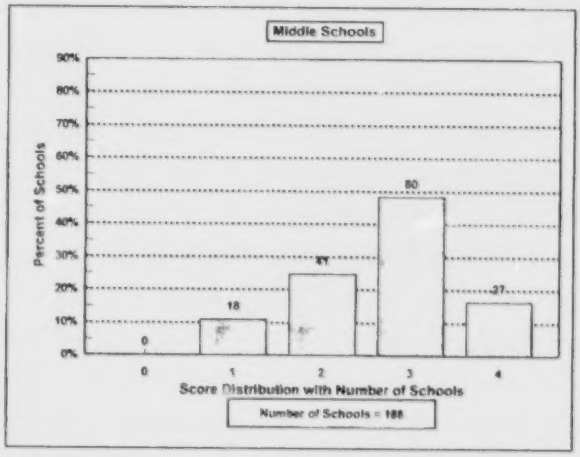
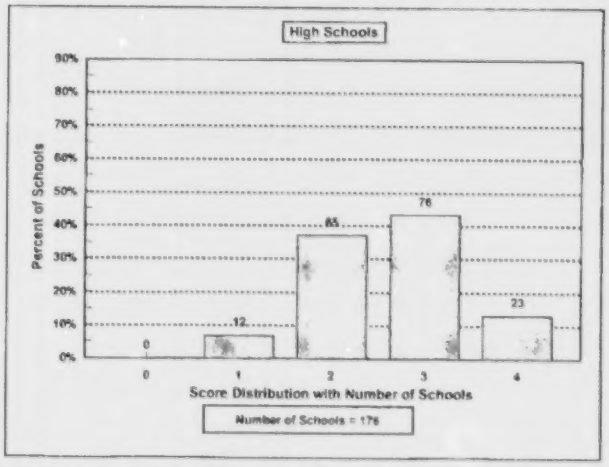
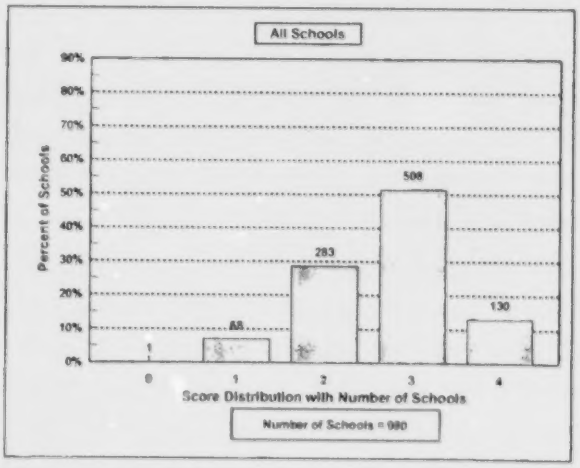
	All system items	57.5%	61.2%	57.5%	58.1%









Interior Lighting:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

All instructional areas are well lit with an appropriate combination of natural and artificial light. All hallway, lavatory and other common areas have appropriate lighting that is consistently in working order.

Section 5
Dedicated Specialty Areas

Districts were again asked to report on dedicated specialty areas within each facility. There are fifteen items in this grouping (art room, music room, all-purpose room, gymnasium, auditorium, cafeteria, outdoor play area, outdoor athletic facilities, educational technology, science lab, library media center, language lab, technical/career education, office/administrative space, and guidance and student services). However, not all of these items apply to each type of facility. High schools and middle schools were asked to skip the question on outdoor play areas, while elementary schools were asked to skip outdoor athletic facilities. Based on actual responses, we discarded the all-purpose room item for high schools because an overwhelming majority of districts reported not having one. Similarly, well over 90 percent of all elementary schools reported no dedicated auditorium, science labs, language labs, or technical/career education areas. Consequently, these items were also discounted for elementary buildings.

Because of the differences in items, data in this section have been grouped separately by elementary, middle and high school facilities. Summary reports by ERG are provided for each level as well.

Elementary Schools

Again in 1999, elementary schools tended to report a higher number of missing features than middle or high schools. As Table 5A indicates, about 21 percent of all responses in this section of the survey for elementary schools indicated the feature was not included in the facility. In part, this is attributable to the prevalence of all-purpose rooms versus separate gymnasiums and cafeterias. An elementary school with an all-purpose room nearly always reported no dedicated gymnasium or cafeteria and vice versa. Other features most commonly reported as missing from elementary schools were guidance/student service offices (38 percent), dedicated art (18 percent) and music (24 percent) rooms, and educational technology (15 percent). In the case of educational technology, however, this percentage is substantially lower than the 17.3 percent reported last year.

A look at Tables 5B and 5C for elementary schools shows the following. About one in four schools (24.1 percent) statewide report at least eight of the ten features surveyed to be reasonably adequate or better. Less than half of the schools (45.5 percent) report a majority of features to be reasonably adequate or better. As with previous sections of the survey, ERG I schools have again been less likely to report quality features and more likely to report inadequate or missing ones. Less than one in four ERG I schools report a majority of its dedicated specialty areas to be reasonably adequate or better, about half of the state average. Nearly half (42 of 90) of the schools reporting a majority of dedicated specialty areas to be less than adequate or not provided are in ERG I. These responses appear to be consistent with the previously discussed age and renovation status for elementary schools in ERG I. Schools in this group tend to be older both in terms of the original construction date and the years since the last major building renovation.

From Table 5C, about 50 percent of all elementary schools statewide indicate that they either lack or have less than adequate accommodations in two or fewer of the ten areas surveyed. Conversely, that means that 50 percent of schools are deficient in three or more of the ten areas. About one in seven schools report a majority of the items (six or more) to be less than adequate or missing.

BEST COPY AVAILABLE

In this section of the survey, the more affluent ERGs A and B report the best overall conditions with none of their elementary schools having a majority of inadequate or missing features. The vast majority of schools in these groups indicated two or fewer of the ten dedicated specialty areas to be inadequate.

Middle Schools

In general, the ratings for middle schools are a little higher than for elementary facilities. A greater percentage of total responses rate specialty areas to be reasonably adequate or better (54 percent versus 50 percent). Middle schools also report fewer inadequate or missing features, and when they do, it is most often because the facility is missing a particular feature. Over half of the "not included in facility" responses result from two items: all-purpose rooms and language labs. Neither of these results is particularly surprising, since many middle schools are former high schools or were built on the high school model with separate gymnasiums and cafeteria facilities rather than the all-purpose room more common to elementary facilities. As far as dedicated language labs are concerned, less than one in four middle schools report having one. While that figure is low, it is not that far below high schools where nearly two-thirds have no language labs. Auditoriums and technical/career education were the only other features missing from middle school facilities more than 10 percent of the time.

The comparison of middle schools by ERG in Tables 5E and 5F does not produce the same results as for elementary schools. There is not a clear pattern that suggests the middle schools in needier ERGs are any more likely than those in more affluent groups to be lacking in accommodations or have features that are less than adequate. In fact, as shown in Table 5E, ERGs C, E and G report the three lowest percentages of schools rating 11 or more of the 14 specialty areas surveyed to be reasonably adequate or better. ERG I schools show no deviation from the state averages for middle schools.

Section 5
Dedicated Specialty Areas (continued)

High Schools

High school facilities were most likely to include all or most of the specialty areas surveyed. From Table 5G, only 192 of 2041 (9.4 percent) of total responses show features missing from buildings, and over one-half of these (98) can be attributed to the language lab item. Auditoriums, educational technology and music rooms are the other areas most frequently reported to be lacking (29, 22 and 18 schools, respectively). As far as the number of features rated reasonably adequate or better, high schools were rated above both elementary and middle schools (61 percent versus 50 percent and 54 percent, respectively). It appears that the high school buildings tend to have the most and best accommodations, particularly when compared to elementary schools.

The ERG Tables 5H and 5I do not reveal any marked differences in the high schools for any particular ERG. ERG C shows the lowest percentage (25 percent) of facilities that report substantially adequate or above adequate conditions, although a change in a school or two would bring ERG C back in line with state averages. Otherwise, there appear to be no major differences.

While noting that all 17 state vocational-technical schools report at least three specialty areas to be less than adequate or not provided for, it must be pointed out that vocational-technical schools do not have auditoriums, music rooms or language labs. As a result, the vocational-technical schools start out with three missing features. In fact, of the 72 responses rated less than adequate or missing by the vocational-technical schools, all but five reflected missing features as opposed to inadequate conditions.

High schools tend to be rated slightly higher in more affluent ERGs. None of the six high schools reporting a majority of inadequate or missing features comes from ERG A, B or C (Table 5I). Eighty-one percent of the high schools in these three ERGs reported no more than two inadequate or missing features compared to the statewide average of 70.7 percent.

Art Room(s):

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

There is a complete art program with a dedicated art room to accommodate either individual or small group projects and specialized equipment. The lighting is brighter than in most other instructional spaces, and water and sinks are provided. There is adequate storage for supplies and ongoing projects.

SUMMARY TABLE

Rating	Description	Elementary Schools	Middle Schools	High Schools	All Schools

Music Room(s):

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

There is separate dedicated space designed for the music program, both choral and instrumental, with acoustic treatment. There is adequate storage space for sheet music and instruments, along with practice rooms.

All-Purpose Room (Gym/Aud/Caf.):

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

There is a general purpose room that serves as any combination of gymnasium, auditorium and cafetena.

SUMMARY TABLE

Rating	Description	Elementary Schools	Middle Schools	High Schools	All Schools

Gymnasium:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

The school has gymnasium facilities with sufficient space to accommodate equal programs. Middle and high schools should also include shower and locker facilities. Adequate equipment for the appropriate grade range is available, along with sufficient storage space.

Auditorium:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

The school has an auditorium with fixed seating for at least one-half of the enrollment, with the capacity to do theater productions as well as vocal and instrumental performances.

SUMMARY TABLE

Rating	Description	Elementary Schools	Middle Schools	High Schools	All Schools

Cafeteria:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

There is a cafeteria that seats at least one-third of the enrollment (for elementary schools) or one-fourth of the enrollment (for middle and high schools). Kitchen, serving and seating areas are well equipped and provide a comfortable dining environment.

Outdoor Play Area(s):

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

There is up-to-date equipment in safe condition, age appropriate, isolated from traffic, well drained, and of sufficient size to meet school programs and enrollment. Play area may be municipal if adjacent to the school.

SUMMARY TABLE

Outdoor Athletic Facilities:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

The playing fields meet the requirements of a complete interscholastic athletic program and are maintained in playing condition with adequate spectator and competitor accommodations. Athletic facilities may be those of the municipality and may be in a separate location from the school, except that off-site facilities should not be rated a 4 unless they are complemented by on-site facilities that properly support physical education instruction and intramural sports.

SUMMARY TABLE

Education Technology:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4:

Hardware/Software combination utilizing voice, video and data communications used within spaces for the educational process. (Differs from survey item # 26, Technology Infrastructure, which is more focused on the wiring inside the walls.) A dedicated computer lab in lieu of usage in all program areas should get maximum rating of 2.

Science Lab(s):

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

The school has sufficient teaching and laboratory space, equipped for biological, physical and earth science programs (elementary schools) or for earth science, biology, chemistry and physics (middle and high schools). Adequate prep rooms including appropriate water and gas fixtures and proper storage for hazardous materials with appropriate ventilation.

	All dedicated specialty area items	30.0%	24.6%	14.9%	26.0%
Percent of responses rated 3 or 4:					
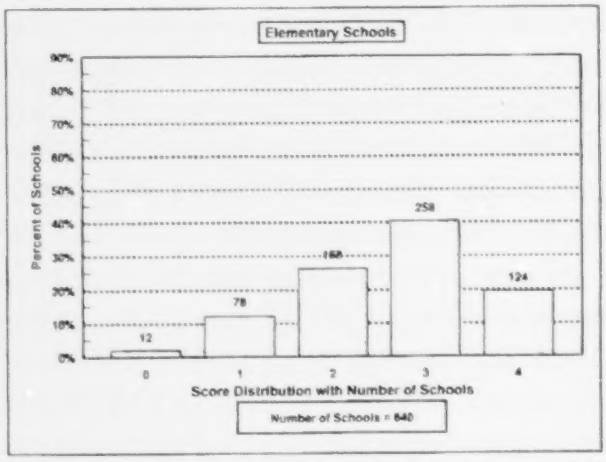
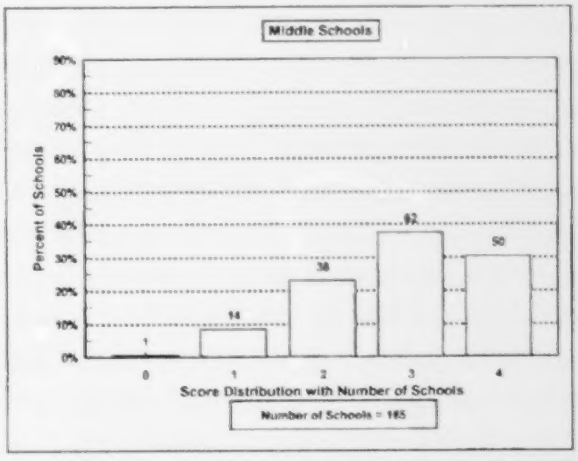
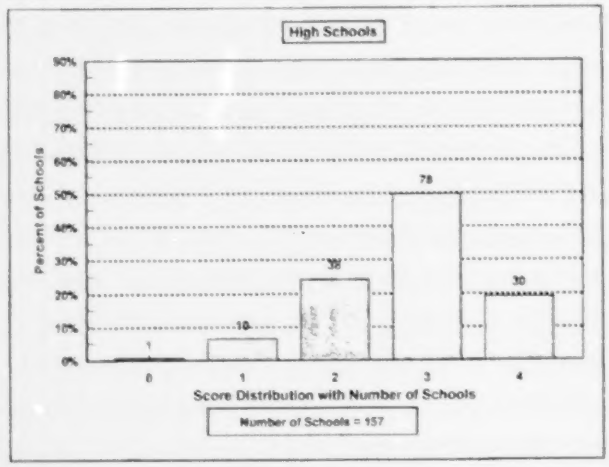
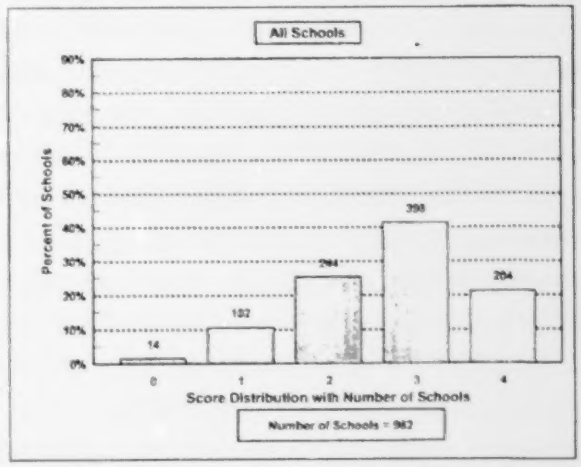
	Library Media Centers	59.7%	67.9%	68.8%	62.6%
	All dedicated specialty area items	49.8%	54.5%	61.1%	53.0%









Language Lab(s):

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

The school has dedicated language lab(s) which are multi-media areas enabling students to communicate through video, voice and data systems, as well as to record on an interactive basis.

SUMMARY TABLE

Rating	Description	Elementary Schools	Middle Schools	High Schools	All Schools
0	Not included in Facility	N/A	128	98	226
1	Less than adequate	N/A	8	13	21
2	Minimally adequate	N/A	13	14	27

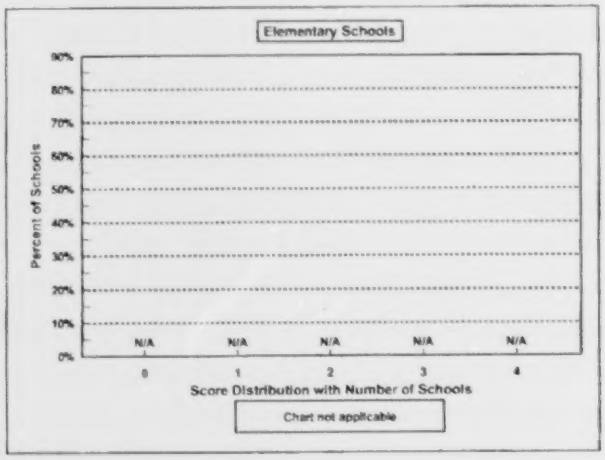
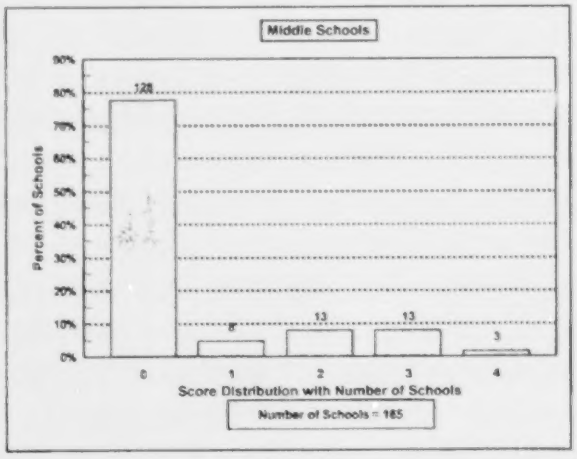
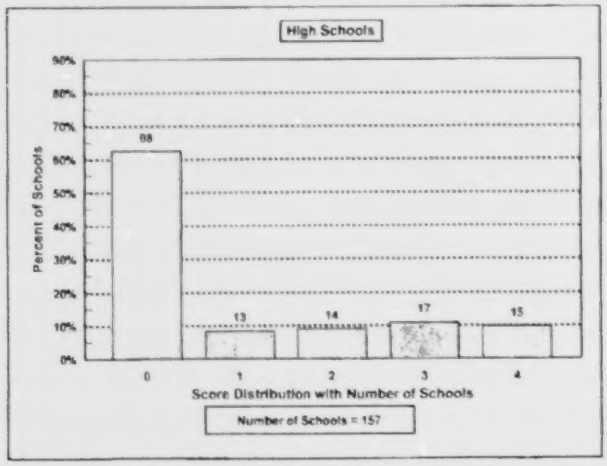
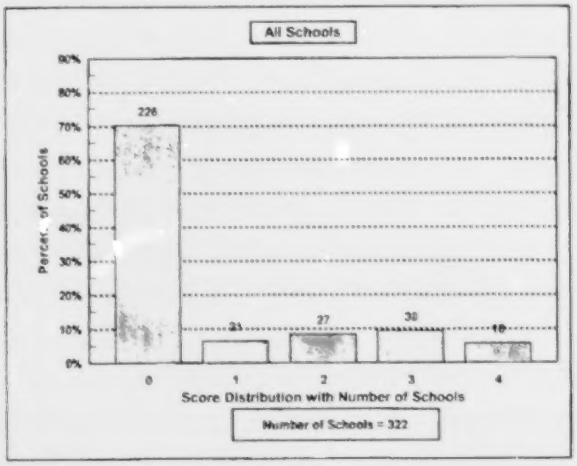
	Language Lab(s)	N/A	9.7%	20.4%	14.9%
	All dedicated specialty area items	49.8%	54.5%	61.1%	53.0%









Technical/Career Education:

· Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

There is sufficient space, wired with voice, video and data technology, to teach and learn the content of technology education for the appropriate grade range. The space, consisting of both classroom and laboratory areas, is equipped with design tools, fabrication tools and materials essential to offering hands-on experiences in transportation, manufacturing, communication and construction systems. Facilities must also include all health and safety systems required by federal, state and local regulations.

SUMMARY TABLE

Rating	Description	Elementary Schools	Middle Schools	High Schools	All Schools
0	Not included in Facility	N/A	42	14	56
1	Less than adequate	N/A	12	9	21
2	Minimally adequate	N/A	46	45	91
3	Reasonably adequate	N/A	46	72	118
4	Well above adequate	N/A	19	17	36

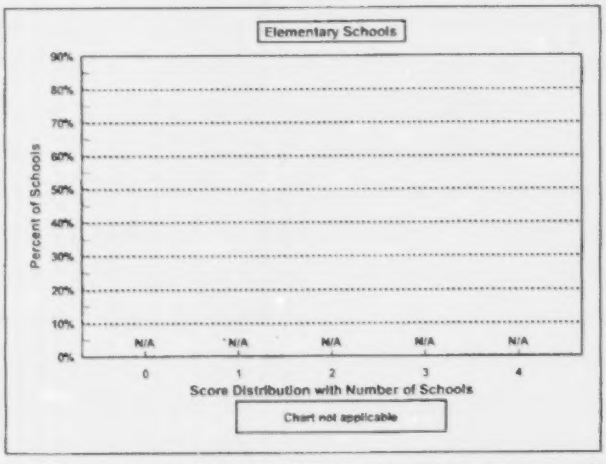
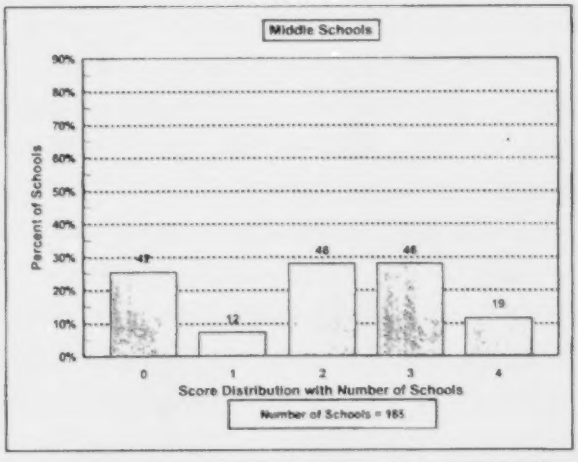
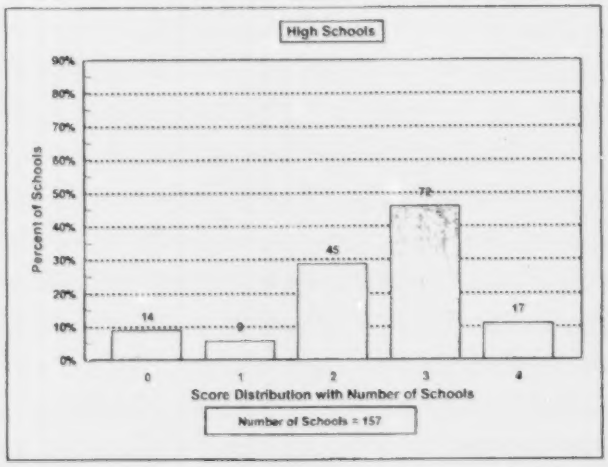
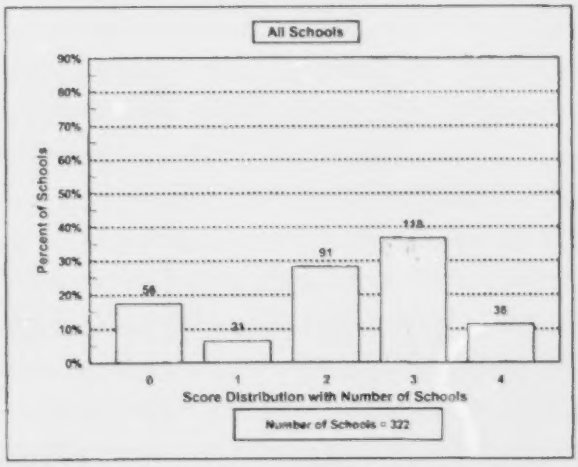
	Technical/Career Education	N/A	39.4%	56.7%	47.8%
	All dedicated specialty area items	49.8%	54.5%	61.1%	53.0%









Office/Administrative Space:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

The school contains sufficient space to accommodate the school administration, including an efficient waiting and general office area with close proximity to main entrance of school. Offices are well planned, clean and quiet so as to present a professional educational atmosphere, and include technology infrastructure (e.g. voice, data, video connections).

SUMMARY TABLE

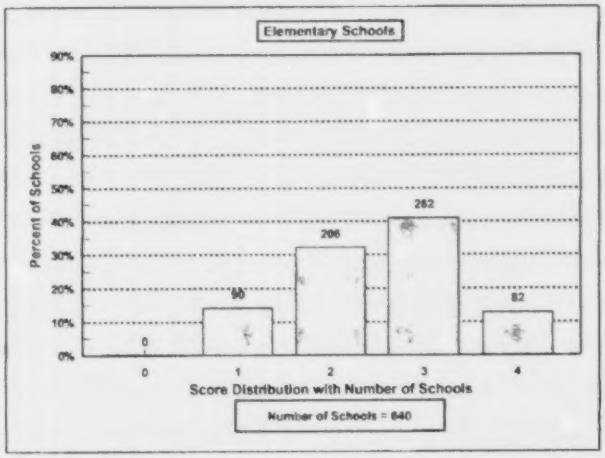
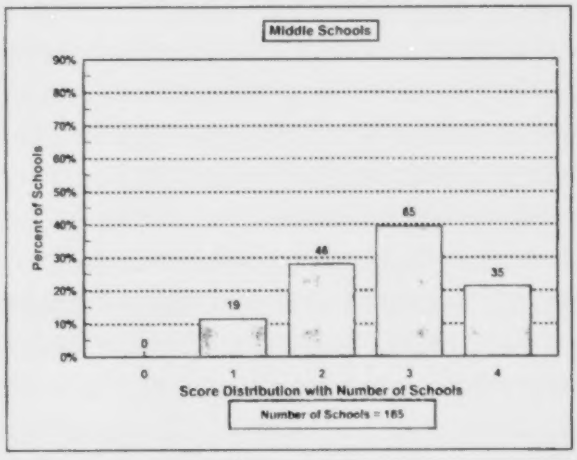
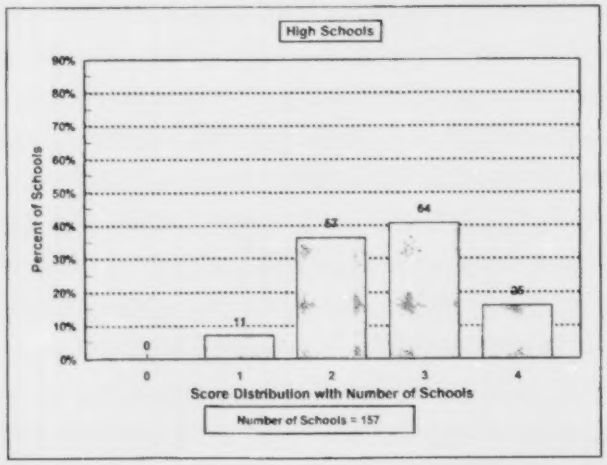
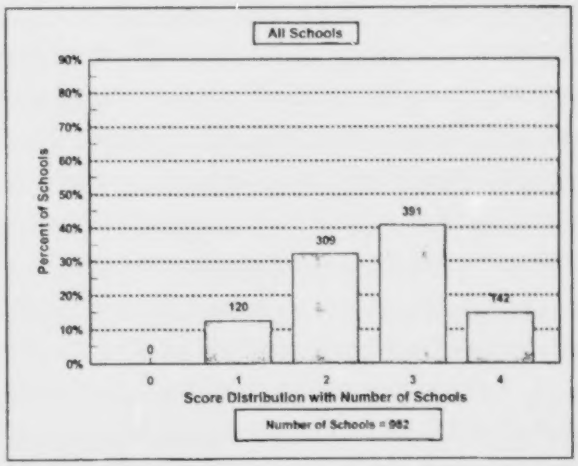
	Office/Administrative Space	53.8%	60.6%	56.7%	55.4%
	All dedicated specialty area items	49.8%	54.5%	61.1%	53.0%









Guidance/Student Services:

Districts were asked to rate each item on a scale of 0 to 4 as described in the summary table below. The survey instructions included the following description of a facility that can be considered for a rating of 4.

The school maintains guidance offices where counselors can meet with students in a confidential atmosphere that is clean, quiet and uncluttered. Student services, where provided, are in a central area with material presented in an attractive and orderly manner and include technology infrastructure.

Section 6
Building Size and Capacity

This section of the report looks at building size and current capacity. Reported items include square footage, site acreage, number of general classrooms, number of portable classrooms, building capacity (net of portable classrooms) and October 1998 enrollment. Capacity, as used in this survey, was determined by school districts based on current programs and usage which may differ significantly from originally designed capacity. For example, buildings originally constructed to house 30 students per classroom may now carry a capacity far less than that due to class size limitations in collective bargaining agreements or local board policy, accommodations for handicapped accessibility, and the addition of computer workstations in many classrooms.

In addition, we would urge some caution in using capacity figures alone to determine a building's optimum or desirable enrollment level. While there is no fixed rule, it can be argued that a building's effective capacity may fall between 85 and 95 percent of its maximum capacity. This lower figure builds in an allowance for scheduling flexibility and reduces strain on core facilities that tend to be designed for use at any one time by only a fraction of a school's total enrollment. It makes sense that as maximum capacity is approached, and certainly when it is exceeded, the condition of a building will be taxed more heavily.

Furthermore, reliance on the maximum capacity figures only may understate additional space needs. To illustrate this point, the percentages of schools at or below 100 percent capacity and the percentages at 90 percent are compared below:

	Percentage of Schools		
Capacity Level	Elementary	Middle	High
Less than 100 percent	75.8%	71.1%	87.9%
Less than 90 percent	47.8%	50.6%	61.1%

While the vast majority of schools report being under their maximum capacity, only about half of elementary and middle schools and three-fifths of high schools are below 90 percent of their reported capacity.

District-level data are as follows:

	Number of Districts		
Capacity Level	Elementary	Middle	High
Less than 100 percent	80.6%	73.1%	89.3%
Less than 90 percent	49.7%	47.9%	59.5%

Section 6
Building Size and Capacity (continued)

About half of the school districts report elementary and middle school usage above the 90 percent mark; about two-fifths of districts for high schools. While some additional space will clearly be necessary by any measure, the amount of new space will be greater if effective capacity is the yardstick rather than maximum capacity.

Enrollment has grown steadily, although at a modest rate throughout this decade (17 percent aggregate growth since 1989). Student population has been forecast to continue to grow slightly for several more years before leveling off at just over 550,000. The rate of growth has not, however, been uniform across all districts. Some have experienced rapid 30 to 40 percent growth, others much less, and a few have even declined in enrollment. The need for new construction will not impact all districts but will continue to vary from town to town across the state. It may even vary within a district where the elementary school in a particular neighborhood becomes overcrowded while other neighborhood schools remain within capacity. Likewise, growth and the need for space at the elementary level may not translate into new space at the middle or high school level, although in many cases it does. A number of high schools built at the height of the baby boom enrollment peak still appear to have sufficient excess capacity to deal with the larger enrollments being passed on to them from lower grades.

In addition to enrollment growth, other factors will certainly impact the space needs of schools in the years ahead. For example, growth in prekindergarten programs, class size reduction incentives in the early grades, and any move toward universal full-day kindergarten programs may require hundreds of additional classrooms in elementary schools across the state. The immersion of technology into individual classrooms with multiple workstations rather than a single instructional computer will shrink the effective capacity of many classrooms.

When the overall statewide enrollment projection of 550,000 is compared to the maximum reported capacity figure of just over 600,000, we would caution against the conclusion that space presently exists for 50,000 more students. Keep in mind again that 550,000 divided by 600,000 shows an overall utilization factor of 91.7 percent which is arguably close to the effective maximum usage level.

Individual differences from town to town and region to region will dictate additional space needs in some areas even though others may remain within existing capacity. This pattern suggests to us that construction activity in Connecticut will continue to be a mix of renovations to existing facilities along with building additions. There will also be some new facilities built where expansion is not a viable option and where the age and condition of an existing facility warrants total replacement of a building.

Notes:

These facilities are excluded from various reports and tables in this section because they: 1) could not be assigned elementary, secondary or middle school status; 2) could not be assigned to an ERG; and/or 3) their inclusion (alternative high schools virtually always operate in an older mothballed building with few comprehensive features) would tend to distort the results.

Section 7
Long-Term Facility Planning, Maintenance and Implementation

With regard to long-range facility planning, the results for 1999 do show significant improvement. Last year 31 districts reported no long-range facility program as required under Section 10-220 of the Connecticut General Statutes. That number has been reduced to four districts, all of which are one-school, elementary districts. These four will be unable to pursue future school construction projects until such programs are in place.

Districts were also asked to rate their community's implementation of its long-range program. One hundred ten districts (65.5 percent) reported reasonably adequate or better implementation activities. Only 14 districts report less than adequate implementation of their building programs (plans), down significantly from last year's total of 41.

Similar questions regarding a facilities maintenance plan and its implementation, and an equipment repair/replacement program revealed the following: 127 districts (75.6 percent) reported a reasonably adequate or better maintenance plan, while 12 (7.1 percent) reported an inadequate plan or no plan. As for implementation, 105 districts (62.5 percent) reported reasonable maintenance plan implementation. Less than adequate implementation was reported by 18 (10.7 percent) districts. For equipment replacement, 94 (56.0 percent) reported a reasonably adequate or better plan, with 27 districts (16.1 percent) indicating inadequate or missing plans.

This data sorted by ERG appears in Tables 7A and 7B. The small numbers of districts reporting less than adequate performance tend to make some of the percentages misleading. (A shift of a single district can have a significant impact.) It is still pretty clear that the wealthiest ERGs have the best overall planning and implementation numbers.

School Facilities Survey Update
ED050U, New 4/99
Statutory Ref: C.G.S. 220(a)

State of Connecticut
Department of Education
School Facilities Unit
PO Box 2219
Hartford, CT 06145-2219

Filing date: May 7, 1999

Completed by: _____ Title: _____ Telephone: _____ Fax: _____

Town: Town code:

School: School code:

Check box if this facility is no longer used for school purposes ☐ Year facility closed: _____

Section 1: Review each item and (1) edit as necessary using EDT system as detailed in enclosed instructions or (2) if filing manually, draw line through any incorrect item and make corrections in red ink.

1 Year of original construction: _____
2 Total square footage: _____
3 Total site acreage: _____
4 Year of last major renovation: _____
5 Number of general classrooms (perm): _____
6 Number of portable classrooms: _____
6a In use since (year): _____

7 Handicapped accessibility (check one):
a) None _____
b) General areas only _____
c) All programs _____
d) All areas _____
8 Major code update since 1988 (Y/N): _____
9 Building capacity: _____

Section 2: Review each item and (1) edit as necessary using EDT system as detailed in enclosed instructions or (2) if filing manually, draw line through any incorrect item and make corrections in red ink.

Building Features: Dedicated Specialty Areas	Rating (Scale: 0 = none, 1 = lowest, 4 = highest Please see instructions for detailed explanation)		Rating
10 Art Room(s)		18 Educational Technology	
11 Music Room(s)		19 Science Lab(s)	
12 All-Purpose Room (Gym/Aud/Caf.)		20 Library Media Center	
13 Gymnasium		21 Language Lab(s)

(Superintendent of Schools)

Appendix B

Instructions for Completing
School Facilities Survey Update (ED050U) and School Facilities Survey (ED050)

General: The **ED050U** is an update form which includes data provided by school districts during our last survey. Please review each response and edit as necessary. If filing manually, draw a line through any incorrect response, make correction in red ink, and return to the School Facilities Unit.

The **ED050** is a blank form which is to be used for filing data on a facility for which a form ED050U has not been included. Please refer to the attached item descriptions and complete the survey accordingly.

If using the Electronic Data Transfer (EDT) system to **file either form**, after logging on, make the following selections to arrive at the data entry system:

select option #3 (Division of Grants Management) from the main menu;
select option #5 (School Construction System); and
select option #4 (School Facilities Survey).

ED050U Town/School Section:
Note: If you receive a form ED050U for a facility that is no longer being used for school purposes, an item has been included to indicate the year the facility was taken off line. No other items need to be completed for such a facility.

Section 1: Do not consider planned activities or projects in process unless the work is substantially complete. The State Department of Education (SDE) will use current school facilities project records to account for improvements in progress.

Section 2: Each item in Section 2 of this survey is to be rated on a scale of 1, 2, 3 or 4, where a score of 1 is lowest and 4 is highest. In addition, use a zero (0) to indicate a feature that does not exist at all within your facility. In general, a score of 1 should mean that a particular feature or system as it exists is inadequate to meet even the minimal needs of the facility. A score of 2 should indicate a feature or system that meets minimal conditions but is not dependable, breaks down frequently, may be cramped or has other limitations. In other words, it is a feature or a system that would require some upgrading to be considered adequate. A score of 3 should mean a feature or a system that reasonably accommodates the needs of the school, is most often in good condition, and generally meets some, but not all, of the characteristics of an excellent accommodation. A score of 4 should be reserved for items that meet all the reasonable needs of the facility pertaining to that item. We have provided a description of what we would expect each item to include to qualify for a rating of 4. In many cases, the description includes one or more relatively minor enhancements to what otherwise is a good feature or system. This is done intentionally to convey the idea that a 4 rating should be used only for features or systems that go well beyond adequate. We would not anticipate many schools receiving ratings of 4 in most categories unless the facility is new, has undergone extensive renovations, or has been updated and maintained at a very high level over the years. It is more likely that good facilities will have some 4 ratings, but mostly 3s. We would tend to view a facility with an average rating on all items of around 3 as a quality facility. Essentially, the scale translates into a rating of 4 = excellent, 3 = good, 2 = fair, 1 = poor, and 0 = missing. If there are any special or dedicated purpose rooms (art, music, science lab, etc.) that are not currently being used for their designed purpose, please indicate a '0' in the section which refers to that once dedicated space.

Section 1:

1. Year of original construction:
   Use the year that all, or most, of the facility that is used for classrooms was originally constructed.

2. Total square footage:
   Indicate the total facility square footage **exclusive of portable classrooms**. Also, include floor area that may be allocated to district central administrative offices.

3. Total site acreage:
   Indicate the total acreage allocated to this facility. In situations where several schools share a common site, a portion of the total site acreage should be allocated to each school.

4. Year of last major renovation:
   Indicate the year in which you completed the last major renovation of the existing facility. If a new wing was added but there was no major renovation of the existing facility as part of the addition project, do not use this date.

5. **Number of general classrooms (permanent):**

   Indicate the number of general classrooms that may be used for general classroom instruction. Do not include specialty rooms such as science labs, choral rooms, gymnasium, auditorium, etc. This item was not included on the 1993 survey and therefore will need to be completed in all cases.

6. Number of portable classrooms:
   Please provide the number of classrooms housed in portable (a.k.a. relocatable or temporary) buildings. This is not necessarily the number of portable buildings, as multiple rooms may be in a single building.

6a. In use since (year):
   Please provide the year in which most of the portable buildings were installed.

7. Handicapped accessibility (check one):
   None: The facility has essentially no access for persons with disabilities.

   General areas: General building access is available to the main offices, auditorium and similar areas. However, at least some academic programs offered at the facility are not accessible to persons with disabilities.

   All programs: Although all *areas* of the facility may not be accessible, accommodations have been made so that all *programs* may be offered in accessible areas.

   All areas: All areas of the facility are accessible to persons with disabilities.

8. Major code update since 1988 (y/n):
   Has the facility undergone an upgrade since 1988 to bring the facility into *full conformity* with the codes (building, fire, ADA, OSHA, health.) Projects to address partial conformity do not qualify.

9. Building capacity:
   Please provide the capacity of the facility. Present capacity may differ significantly from the original designed capacity due to changes in use and other modifications over the years. Respondents should be able to explain the derivation of the capacity figure provided.

Section 2:

Building Features:
Dedicated Specialty Areas

10. Art Room(s):
    There is a complete art program with a dedicated art room to accommodate either individual or small group projects and specialized equipment The lighting is brighter than in most other instructional spaces, and water and sinks are provided. There is adequate storage for supplies and ongoing projects.

11. Music Room(s):
    There is separate dedicated space designed for the music program, both choral and instrumental, with acoustic treatment. There is adequate storage space for sheet music and instruments, along with practice rooms.

12. All-Purpose Room (Gym/Aud/Caf):
    There is a general purpose room that serves as any combination of gymnasium, auditorium and cafeteria. If there is such as room, you must answer with a '0' for any dedicated room listed below that is served by the all-purpose room.

13. Gymnasium(s):
    The school has gymnasium facilities with sufficient space to accommodate equal programs. Middle and high schools should also include shower and locker facilities. Adequate equipment for the appropriate grade range is available, along with sufficient storage space.

14. Auditorium:
    The school has an auditorium with fixed seating for at least one-half of the enrollment, with the capacity to do theater productions as well as vocal and instrumental performances.

15. Cafeteria:
    There is a cafeteria that seats at least one-third of the enrollment (for elementary schools) or one-fourth of the enrollment (for middle and high schools). Kitchen, serving and seating areas are well equipped and provide a comfortable dining environment.

16. Outdoor Play Areas (Elementary Schools):
    There is up-to-date equipment in safe condition, age appropriate, isolated from traffic, well drained, and of sufficient size to meet school program and enrollment. Play area may be municipal if adjacent to the school.

17. Outdoor Athletic Facilities (Middle and High Schools):
    The playing fields meet the requirements of a complete interscholastic athletic program and are maintained in playing condition with adequate spectator and competitor accommodations. Athletic facilities may be those of the municipality and may be in a separate location from the school, except that off-site facilities should not be rated a 4 unless they are complemented by on-site facilities that properly support physical education instruction and intramural sports.

18. Educational Technology:
    All classrooms are wired for voice, video and data technology in accordance with the Guidelines for Technology Infrastructure in Connecticut Schools as published in December 1995 by the Connecticut State Department of Education. A dedicated computer lab wired for voice, video and data in lieu of all rooms being wired should be rated at a maximum of 2.

19. Science Lab(s):
    The school has sufficient teaching and laboratory space, equipped for biological, physical and earth science programs (elementary schools) or for earth science, biology, chemistry and physics (middle and high schools). Adequate prep rooms including appropriate water and gas fixtures and proper storage for hazardous materials with appropriate ventilation.

20. Library Media Center:
    Has sufficient space to accommodate an adequate print, nonprint and electronic collection of materials, seating for instructional and study purposes, technology workstations, circulation, work area and storage.

21. Language Lab(s):
    The school has dedicated language lab(s) which are multi-media areas enabling students to communicate through video, voice and data systems, as well as to record on an interactive basis.

22. Technical/Career Education:
    There is sufficient space, wired with voice, video and data technology, to teach and learn the content of technology education for the appropriate grade range. The space, consisting of both classroom and laboratory areas, is equipped with design tools, fabrication tools and materials essential to offering hands-on experiences in transportation, manufacturing, communication and construction systems. Facilities must also include all health and safety systems required by federal, state and local regulations.

23. Office/Administrative Space:
    The school contains sufficient space to accommodate the school administration, including an efficient waiting and general office area with close proximity to main entrance of school. Offices are well planned, clean and quiet so as to present a professional educational atmosphere and include technology infrastructure (e.g. voice, data, video connections).

24. Guidance/ Student Services:
    The school maintains guidance offices where counselors can meet with students in a confidential atmosphere that is clean, quiet and uncluttered. Student services, where provided, are in a central area with material presented in an attractive and orderly manner and include technology infrastructure.

Systems

25. Internal Communications:
    The facility has an intercom system enabling communication with all academic and administrative areas of the school individually and collectively. All classrooms have capacity to communicate with the principal's office and have access to an outside telephone line.

26. Technology Infrastructure:
    Complete faciiity access to voice, video and data transmission including all classrooms and administrative areas. Appropriate wiring for multiple computer workstations and other electronic equipment in all program areas.

27. Air Conditioning:
    All instructional and student support service areas are air conditioned, as well as administrative areas. System works to keep the building comfortable throughout the cooling season. (If only administrative offices are air conditioned, this category should be responded to with a '0'.)

28. Heating
    Fully operational heating system with zoned controls that allow for regulation in each classroom and office area. System works to keep the building comfortable throughout the heating season.

29. Interior Lighting:
    All instructional areas are well lit with an appropriate combination of natural and artificial light. All hallway, lavatory and other common areas have appropriate lighting that is consistently in working order.

30. Exterior Lighting:
    Exterior facade, walkways, roadways and parking areas have proper lighting that provides complete coverage of these areas for nighttime use. There are no dark or unlit areas around the perimeter of the building.

31. Roadways and Walks:
    All walks and paved areas are free of potholes and caved-in areas, are properly marked for traffic control and pedestrian safety, and are graded for handicapped accessibility.

32. Plumbing/ Lavatories:
    Plumbing is up to modern standards throughout the building with sufficient lavatories for students and staff, shower facilities in the locker rooms, sinks as needed in specialty classrooms, kitchen areas, drinking fountains, maintenance areas including external water supply fixtures.

Building Conditions: Appearance / Upkeep

33. Building Facade:
    The facility is in sound condition, and there are no broken windows. The exterior is clean, bright, neat in appearance and free of graffiti, damage and vandalism. Instances of graffiti, damage and vandalism are promptly corrected.

34. Grounds/Landscaping:
    Areas are routinely kept free of litter and debris, lawns and shrubs are regularly trimmed, and all lawns/grass areas are fully covered. There should be some provision for green space and plantings that are appropriate to the site.

35. Classrooms:
    The classrooms are adequate in number and size for the programs offered. All casework, ceilings, walls and floor coverings are clean, neat and without damage. All windows are operable, and the rooms are regularly cleaned. There should be ample closet/shelf space for storage of instructional materials, and bulletin boards, chalkboards, etc. sufficient to display student work and other materials for instructional use.

36. Lavatories/Fountains:
    There is an adequate supply of safe drinking water, and all fountains are operational. All lavatories are clean, partitions, doors and fixtures are intact and functional to provide privacy. Adequate supplies are provided.

37. Entrance/Hallways:
Main entrance is highly visible to visitors. Entry way is attractive, clean, neat and welcomes people to the school. The area is free of graffiti, damage and vandalism. Lockers are uniform and functioning. All surface coverings (walls, ceilings and floors) are clean, neat and uniform.

38. Lighting/Fixtures:
Fixtures, including emergency lighting, are working and, when necessary, are repaired without undo delay. The fixtures are energy efficient and are controlled by an energy management control system.

39. Cafeteria:
The cafeteria is clean, neat, bright and free from graffiti, damage and vandalism.

40. Code Compliance:
All programs, including outdoor athletic facilities and play areas, are fully accessible to persons with disabilities. The entire facility is in full compliance with State building, fire, OSHA and health codes. There are automatic fire sprinklers throughout the facility. (Although not mandated by code, sprinklers and detection devices would be a significant component of a 4 rating on this item.)

Questions 41-43a are district-wide and should be completed by the superintendent.

Facility Planning / Maintenance

41. Long-Range Building Plan:
District-wide plan that is complete and up to date, projects out at least five years, and has been recognized by both the town and the school board as the official plan.

41a. Plan Implementation:
Plan implementation is on schedule with necessary projects underway or imminent. Needed funds are most always approved.

42. Equipment Repair/Replacement:
District has a written plan for the repair and replacement of equipment based on useful life and other appropriate factors. Plan covers all major plant and operational equipment, is most often followed in the fiscal planning of the board, and is most often funded at a reasonable level.

43. Building Maintenance Plan:
District has a written building maintenance plan which includes general cleaning schedules, major cleaning schedules, service system maintenance schedules for all major building components including roofs. Plan takes into account fiscal cycles and prioritizes activities to accommodate funding constraints.

43a. Plan Implementation:
High level of implementation with reasonable funding in each annual board budget and town appropriation.

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, *Resources in Education* (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

The sample sticker shown below will be affixed to all Level 1 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY
